DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-3 are rejected under 35 U.S.C. 102(a) as being anticipated by Cowans (US 2002/0104492).

Cowans discloses a variable compression engine where fuel is inversely changed with respect to the compression ratio (see claim 26).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tawara et al (JP 60230526) in view of "Introduction to Closed-Loop Control".

Tawara et al disclose compression ratio feedback control system 24, 27, 32. However, the particulars of the deviation control is not set forth. "Introduction to Closed-Loop Control" is cited merely to show that proportional feedback control is notoriously old and is used to quickly reduce system output errors-the greater the deviation, the quicker the correction. It would have been obvious to one of ordinary skill in the art to use proportional feedback control in Tawara et al with respect to the compression ratio drive as suggested by "Introduction to Closed-Loop Control" to more accurately operate the engine.

Allowable Subject Matter

Claims 4-8, 10, and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 11-15 are allowed.
